Overall Best Solar Panel in CHOICE® Test

Tindo Karra G2H Reviewed as a CHOICE Recommended Product

How do CHOICE test their solar panels?
CHOICE partnered with PV Lab, a world-class photovoltaics test laboratory, to put solar panels from leading brands on test. This includes lab testing the panels for their power output under standard lab conditions. It's important that a panel really does produce at least its minimum claimed power output in this test; after all, if you've paid for 370W panels, you don't want their actual performance to be like cheaper 350W panels.

CHOICE's solar panels review shows each panel's claimed power tolerance – this is the potential difference between the claimed power rating and the measured performance under STC. This means the manufacturer is claiming the panel's rated power output should be the bare minimum it will deliver (under STC), and that some samples will actually deliver a little more.

Tindo recognised as the Overall Best Solar Panel in CHOICE® Test, 2025.

Tindo recently topped the CHOICE survey of 15 solar panels available in the Australian market. In that survey, Tindo's Karra 410W module was the only panel in which the tested output matched the nameplate claim.
